## Short answer questions

Q1 What are permanent teeth?

Ans Milk teeth are replaced by a second set of teeth. This second set of teeth is known as permanent teeth.

Q2 What is the function of pulp?

Ans Blood vessels and nerves run through the pulp of the teeth.

Q3 Define plaque.

Ans germs start growing on teeth and lead to the formation of a yellow sticky coating called plaque.

---

Q4 Why does food need to be broken down?

Ans Food needs to be broken down because it can be easily taken in and absorbed by the body.

## Long answer questions

Q1. Describe the four types of teeth.

Ans. Types of teeth

1. Incisors :- These are the front teeth

and 8 in number. They

help in cutting and biting the food.

2. Canines :- These are pointed teeth beside

the incisors and 4 in number.

They help in tearing the food.

3. Premolars :- They are behind the canine

and 8 in number. They help to crack, crush and chew the food.

4 Molare :- They are present behind the premolars and 12 in number. They help in chewing and grinding of food.

---

Q2 Explain briefly the part of a tooth with a labelled diagram

Ans A tooth has two main parts - crown

and root.

1. Crown :-> The upper part of tooth

that is visible is known as the crown. It is covered by

enamel.

2. Root :-> The lower part of a tooth

is known as root. It is covered by gums. It is made up of cementum, dentine and pulp.

Structure of a tooth
